                                                                                                                                                                                                                                                              J. Neurosci. Res. 67:559-565 (2002).

-I-FUNCTION: Potent neurite outgrowth inhibitor which may also help block the regeneration of the nervous central system in adults. Isoform 2 reduces the ani-apoptotic activity of Bcl-xl and Bcl-2. This is likely consecutive to their change in subcellular location, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.

-I-SUBUNI: Binds to RTWAR. Interacts with Bcl-xl and Bcl-2.

-I-SUBUNI: Binds to RTWAR. Interacts with Bcl-xl and Bcl-2.

-I-SUBCELLULAR LOCATION: Integral membrane protein. Endoplasmic reticulum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           specific.
SIMILARITY: Contains 1 reticulon domain.
CAUTION: Ref.11 sequence differs from that shown due to frameshifts in positions 1149 and 1156.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Furthermative apilcing; Named isoforms=4;

the Promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, or analogs/peptides.

Example 5; Page 44-47; 93pp; English.

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering

NS-specific activated T cells, NS-specific antigen, its analogue or peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt crauma, penetrating trauma, hemorrhagic stroke, ischemenc stroke or autoimmune disease, where the injury is spinal cord injury, blunt crauma, penetrating trauma, hemorrhagic stroke, ischemenc stroke or autoimmune disease or neoplasm. The disease results in a degenerative process occurring in either gray or white matter or both. The disease is diabetic neuropathy, senile dementia, Alzheimer's disease, Parkinson's disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, amyotrophic lateral sclerosis, non-atteritic optic neuropathy, and as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral contental, hypodlycemia, Sjorgren Larsson syndrome, acute to uremia, porphyria, hypodlycemia, Sjorgren Larsson syndrome, acute contental, non-atteritic neuropathy, malabsorption and last neuropathy, chronic ataxic neuropathy, malabsorption and last neuropathy and sensory neuropathy, chronic ataxic neuropathy, malabsorption and last sensor syndromes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and IgG amma-pathian committed and incomes, polycythemia vers immunoglobulin (Ig)A- and IgG gamma-pathian committed and incommitted a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pathies, complications of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia telangectasia, Friedreich's ataxia, amyloid polyneuropathies, adrenomyloneuropathy, Refsum's disease, Fabry's disease, or lipoproteinemia. The present sequence represents the rat neurotransmitter receptor protein Nogo-A, an example of NS-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

                            The present invention relates to an isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein from the rat and from the human. The truncated polypeptide is useful for identifying a compound having detectable affinity to a Nogo-A protein. The present sequence is a Nogo-A polypeptide of the invention.
                                                                                                                                                                                                                                                                     PAAGLSAAAVPPAAAAPLLDFSSDSVPPAPRGPLPAAPPAAPERQPSWERSPAAPAPSLP 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described: (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the expression system; (4) a pharmaceutical composition comprising the binding molecule and a carrier or diluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New binding molecule that binds to the human NogoA polypeptide, NiG, NiG-D20 or NogoA623-640, useful in preparing a composition for treating CNS injury or neurodegenerative disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Domain
```

The present sequence is a rat Nogo A protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) wyelin material with which it is natively associated. The protein was drived from a cDNA generated by fusing RO(8037-3, R1-3121 cDNAs isolated from hexanucleotides-primed rat brain stem/spinal cord library, and oliis con A fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, and fragments displaying neurona, oligodendrocyte library. Nogo proteins and treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, neuroblastoma, craniopharyngioma, ependyoma, pinealoma, menagioblastoma, craniopharyngioma, oligodendroglioma, menagioma, cranioplastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. poriable and tissue hypertrophy.

CNIDOZYMES Or antisense Nogo nucleic acids can be used to inhibit con production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in disgnostic and screening methods for predisposition or promote as SEQ ID No: 2 is stated to be the same as the sequence designated as SEQ ID No: 2 is stated to be the same as the sequence for maintenance and screening methods for predisposition in Pig. 13 (see AAXT1384) of the specification. However, this sequence given in Fig. 13 (see AAXT1384) of the specification. However, the sequence given in Fig. 13 SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID No: 29 in disclosure of the 240 240 300 300 360 PAAGLSAAAVPPAAAAPLLDFSSDSVPPAPRGPLPAAPPAAPERQPSWERSPAAPAFSLP 120 AILVENTKEEVIVRSKDKEDLVCSAALHSPQESPVGKEDRVVSPEKTMDIFNEMQMSVVA 360 9 9 go proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons. contributions activity are used in tragments displaying neutric growth cassociated. Nogo proteins and tragments displaying neutric growth contributions, activity are used in the treatment of neoplastic disease of the contributions, planealoma, haemangioblastoma, acoustic neuroma, oligodendroglioma, planealoma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.

Controposation and promote Nogo activity can be used to treat or prevent hyperpropit production of Nogo protein to induce regeneration of and tissue hypertrophy. Ribozymes or antisease Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where contributing the can be used in diagnostic and screening methods for neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for treat or prevent disorders and to screen for or test molecules which can careful treat or prevent disorders or diseases of the CNS. The present sequence of used in the construction of mutant Nogo. A nogon has inhibitory accounts of the control of the specification of the specification or control of the specification.

The present sequence is an alternative version of rat Nogo A protein
which is a potent neural cell growth inhibitor and is free of all central
nervous system (CNS) myelin material with which it is natively
sesociated. Nogo proteins and fragments displaying neurite growth
inhibitory activity are used in the treatment of neoplastic disease of
the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharyngioma,
pendyoma, pinealoma, haemangioblastoma or retinoblastoma and
cligodendroglioma, menagioma, neuroblastoma or retinoblastoma and
degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.
Therapeutics which promote Nogo activity can be used to treat or prevent
hyperproliferative or benign dysproliferative disorders e.g. psoriasis
and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be
neurons or to promote structural plasticity of the CNS in disorders where
neurons or to promote structural plasticity of the CNS in disorders where
neurite growth, regeneration or maintenance are deficient or desired. The

animal models can be used in diagnostic and screening methods for pedisposition to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. Note: The present sequence is an alternative version of the Nogo A sequence shown in Fig. 2A (see AAY1310). SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID No. 29 in disclosure of the specification. However the specification does not include sequences for these SEQ ID numbers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 900

The present invention relates to a method for regenerating nerves or modulating nerve regeneration. The method involves inhibiting or modulating a p75 signal transduction pathway. The invention is useful for treating, preventing or diagnosing neurological diseases based on nerve regeneration and for identifying agents useful for nerve regeneration. The invention is also useful in gene therapy and for preparing vaccine. The present sequence is the Mus musculus Nogo protein. Note: This sequence is said to encoded by SEQ ID NO 9, however this does not appear

Sequence 1162 AA

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene of the agent of the gene of the agent and identifying fat cell relative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell number or size in the subject. The agent comprises an anisense of oligonucleotide. The subject comprises a mammal, preferably a human. The collypeptide to the agent, detecting binding of the agent exposing the polypeptide or a change in an activity of the polypeptide, treating a cubject or a change in an activity of the polypeptide, treating a cubject. The agent comprises an antibody. A method of regulating fat cell subject. The agent under conditions so that fat cell number or size in the agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying a composition for treating or preventing obesity or identees. This sequence represents a composition for treating or preventing obesity or diabetes. This sequence represents a composition for treating or preventing obesity or diabetes. This sequence represents a composition for treating or preventing obesity or diabetes. This sequence represents a composition in the scope of the invention.

The patent relates to neurite growth inhibitor Nogo which is free of all central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, gliobiascoma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma, acoustic neuroma, coligodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alahaimer's and Parkinson's diseases.

Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in dispnetic and screening methods for predisposition to disorders and to screen for or test molecules which can the construction of mutant NiAsar. The mutant is composed of His-tag/T7-tag/VBCCC tag/Vector/Nogo-A sequence as 1-974/T7-tag. Nogo A deletion mutants were
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rat; neurite growth inhibitor; Nogo A; neural cell; myelin; CNS; central nervous system; neoplastic disease; antiproliferative; glioma; antisense gene therapy; neuroblastoma; menagioma; retinoblastoma; degenerative nerve disease; Alzheimer's disease; Parkinson's disease; hyperproliferative disorder; benign dysproliferative disorder; diagnosis; psoriasis; tissue hypertrophy; neuronal regeneration; treatment; structural plasticity; screening; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            840
used for mapping the inhibitory sites of Nogo protein. Major inhibitory region was identified in the Nogo A sequence from amino acids 172-974, particularly amino acids 542-772. In addition, N-terminal region 1-171 was found to be inhibitory to NIH 3T3 fibroblast spreading. Note: The present sequence is not given in the specification but is derived from tax Nogo A sequence shown in AAY1310. SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification. However, the specification does not include sequences for these SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         841 IIDEFPTFVSAKDDSPKLAKEYTDLEVSDKSEIANIQSGADSLPCLELPCDLSFKNIYPK 900

The sequence is the human Nogo protein, a 250kDa myelin-associated axon or growth inhibitor. The invention relates to the use of the nogo receptor, nogo protein, their nucleic acids, vectors expressing them and antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of cranial or cerebral trauma, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis demyelinating, encephalomyelitis, multifocal leukoencephalopathy, panencephalitis, Marchiatava-Bignami disease, pontine myelinolysis, adenoleukodystrophy, Pelizaeus-Merzbacher disease, Spongy degeneration, Alexander's disease, Canavan's disease, metachromatic leukodystrophy, viral infection and Krabbe's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20;

The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a) Polypeptides (ABP68596-ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer antibodies, fusion proteins, T cell populations and antigen presenting antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             118

The invention relates to a novel nucleic acid encoding a polypeptide comprising amino acid residues 27-309 of a 473 amino acid sequence (P1, human Nagor erceptor (NagN PHTRRCT domain), or residues 27-309 of P1 with 1-20 conservative amino acid substitutions, and less than a complete CTS domain, provided that a partial CTS domain, if present, consists of no more than the first 39 consecutive residues. The nucleic acid of the cinvention has neuroprotective acid is useful for decreasing inhibition of axonal growth by a central nervous system (CNS) neuron. The NgR polypeptide or an agent inhibits the binding of Nogo to NgR or NgR-dependent signal transduction in the central nervous system neuron may be used in traating central nervous system disease, disorder or injury, e.g. spinal cord injury. Expression of an NgR protein may be associated with thibition of axonal regeneration following cranial, cerebral or spinal trauma, stroke or a demyelinating disease, such as multiple sclerosis, monophasic demyelination, encephalomyelitis, or Krabbe's disease. The present elected in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     358 EVVSSEKAKDSFNEKRVAVEAPMREEYADFKPPERVWEVKDSKEDS-DMLAAGGKIESNL 416

The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described. (1) a polynuclectide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the expression system; (4) a pharmaceutical composition comprising the binding molecule and a carrier or dilutent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence represents human NogoA, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             454

standard recombinant methodology. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, psinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence represents the human MAGI protein

NOGO-A is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel splice variant, NOGO-C (see AAB82348). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the reasument of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and parkinson's disease, neuromacular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying

sequence 8859, Application US/09949016

patent No. 6812339

GENERAL INFORMATION:
PAPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-10-20
PRIOR PILING DATE: 2000-09-08
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SEQ ID NOS: 207012
SEQ ID NO 8859
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1034
